Report Description

This report provides a complete listing of evaluation, violation and enforcement activities for each handler, including all orphan records. Below the handler id information, the data is presented in three sections; evaluations, violations and enforcements. Notes are provided in each respective section.

Comprehensive Compliance Monitoring and Enforcement Report

Eval. Notes: Earle Naval Weapons Station (Earle) is a support facility to the US Navy Fleet. The facility operates a hazardous waste storage building (Building C-63) under hazardous waste permit NJ0170022172-HWP050001 which allows for greater than 90-day storage of hazardous waste. The facility consists of 3 sections; the waterfront, the main base, and the fire academy. A private road and private railway line connect the main base to the waterfront and the fire academy. Earle generates Large Quantity Generator (LQG) amounts of non-acute hazardous waste from Navy supply ships that service the Navy vessels at sea. When wastes are brought in from the docks, a waste determination is made and hazardous wastes are taken to Earle's hazardous waste storage building C-63. The base also generates hazardous wastes at several points around the facility, including the rail yard - where the facilities rail cars receive maintenance, the hobby shop - where base personnel can work on their personal cars, and the ordinance shop. The Fire Academy is located in the western portion of the base and provides training for shipboard fire brigades to deal with emergencies at sea. The Fire Academy generates waste from the oil water separators which collect and recycle the fire-fighting water. Hazardous and non-hazardous wastes generated throughout the facility and from incoming ships include spent solvents, paint waste, aerosols, lubricants, boiler test, and PCB's from general maintenance and service operations. The wastes are stored in locked storage units in each area, which are managed as <90-day central accumulation areas (CAA) by Earle's environmental division. A tour of the facility was conducted including the waterfront (three (3) Satellite Accumulation Areas (SAA) and three (3) CAA's), the main base (four (5) SAA's and one (1) CAA's and three (3) labeled aboveground used oil tanks), and the fire academy (one (1) labeled aboveground used oil tank and one (1) CAA). The Part B permitted buil

Eval. Notes: Facility is LQG. Inspected Mainside and Dockside of NWS. Joint inspection with NJDEP. Building R-32 is closed. EOD-1 has a Subpart X permit-- range undergoing delayed closure. Facility stated that spray paint station in C-15 should be closed in about a year. Spray paint filter's waste analysis determines filters to be hazardous waste. In process of determining the actual method spray paint filters were disposed.

Eval. Notes: A routine annual TSD inspection was conducted at Earle Naval Weapons Station (Hereinafter Earle) on May 13, 2015 in Colts Neck, NJ. Upon arrival I was met by Mrs. Terri Mason, the environmental manager for the site. Earle is a support facility to the US Navy Fleet. The facility consists of 3 sections, the main base, the waterfront, and the fire academy. A private road and private railway line connect the main base to the waterfront. Supplies and armament are loaded at the waterfront docks onto support ships, which transport the supplies to the Navy fleet out at sea. These supply ships also bring wastes back from the Navy vessels. When wastes are brought in from the docks a waste determination is made and hazardous wastes are taken to Earle's hazardous waste storage building (C-63). The base also generates hazardous wastes at several points around the facility. Hazardous and non-hazardous materials generated include spent solvents, paint waste, aerosols, lubricants, boiler test, and PCBs from general maintenance and service operations. Wastes from these areas are stored in locked storage units, which are managed as less than 90 day storage areas. A fire academy located in the western portion of the base provides training for shipboard fire brigades to deal with emergencies at sea. One less than 90 day accumulation area is located in this area. The Part B permitted building C-63 had 100 containers on the day of this inspection. This area is separated by 7 different storage rooms, organics, acids, caustic, flammables, oxidizers, re-actives, and general waste. The tour of the above mentioned areas of Earle revealed no problems or concerns. A review of required paperwork revealed no violations. No NOVs were issued.

A fire academy located in the western portion of the base provides training for shipboard fire brigades to deal with emergencies at sea. One less than 90 day accumulation area is located in this area. Earle also operates an Explosive Ordnance Detonation (EOD) range as an interim status facility under Federal Government regulations Subpart "X" (Misc Units). This area intermittently generates hazardous wastes when ordnance is destroyed. According to facility personnel, following the detonation of ordnance which contains hazardous constituents the ashes are allowed to cool and then are drummed, labeled, dated and brought to Earle's permitted storage area. The facility has applied for a delay of closure for this unit, which is currently under review by the Bureau of Landfill and Hazardous Waste Permitting.. There were no hazardous wastes being generated at this unit at the time of this inspection. A review of required paperwork revealed no violations.
